

THE PROFESSIONAL SPRAYERS PEOPLE

ULV SPRAYERS

- Available Models
- MANKAR-TWO 70-110 FLEX**
- MANKAR-TWO 60-80 FLEX**
- MANKAR-TWO 30-50 FLEX**

Product description

MANKAR® spraying systems are professional equipment for effective, environmentally responsible and yet economical manual weed control with herbicides or herbicide mixtures without water. They are based on ULV (ultra low volume) technology for optimum distribution of an extremely small amount of active product with an even droplet size.

Benefits

- Amount of herbicide required can be considerably reduced, e.g. by up to 50% with Roundup® PowerFlex on cultivated areas and by up to 80% when using weed sensors on areas with patchy weeds.
- Pushed like wheelbarrows making them ideal for handling large-scale row cultivation as well as grass areas or path
- Lightweight so even upward sloping terrain is not a problem
- Ideal for uneven ground
- Compact and easy to handle

Features

- Two innovative Flex spray hoods with electronic atomisers which can be mounted next to one another either in front of or behind the wheel
- Battery monitoring
- Clearly visible flow control
- Patented segment rotation atomiser and wheel-driven pump guarantee path-dependent, accurate and economical herbicide metering
- Narrow wheel, with a diameter of 53cm

Technical Data

No. of atomisers: 2
 Metering: Wheel-driven pump
 Tank volume: 1 litre
 Surface coverage: Up to 1 ha
 Battery life: 8 h
 Weight: 24 kg

Model	Spray Width	Product Number	Description
Mankar-Two 30-50 Flex	30-50cm	103901	
Mankar-Two 60-80 Flex	60-80cm	103902	Adjustable
Mankar-Two 70-110 Flex	70-110cm	103903	Adjustable
